

Redmine - Feature #21691

Update locales rake tasks to support keys of any depth

2016-01-10 14:14 - Felix Schäfer

|   |              |                        |           |
|---|--------------|------------------------|-----------|
| <b>Status:</b>  | New          | <b>Start date:</b>     |           |
| <b>Priority:</b>  | Normal       | <b>Due date:</b>       |           |
| <b>Assignee:</b>  |              | <b>% Done:</b>         | 0%        |
| <b>Category:</b>  | Translations | <b>Estimated time:</b> | 0.00 hour |
| <b>Target version:</b>  |              |                        |           |
| <b>Resolution:</b>  |              |                        |           |
| <b>Description</b>  |              |                        |           |
| There's a few options to make managing translation files easier.  |              |                        |           |
| The rake tasks can probably be changed to use <a href="https://github.com/cherring/i18ndiff">https://github.com/cherring/i18ndiff</a> (which essentially diffs yaml files, see also <a href="https://chrisherring.co/posts/managing-rails-translations">https://chrisherring.co/posts/managing-rails-translations</a> ) to support keys at any depth. |              |                        |           |
| There is also <a href="https://github.com/glebm/i18n-tasks">https://github.com/glebm/i18n-tasks</a> that could be used to this purpose, but this would probably be a bigger change.   |              |                        |           |
