<b>Description</b> Hello. We found one bug, maybe feature (very strange feature).  Description: <ul style="list-style-type: none"><li>• We have 3 tasks: Task 0, Task 1 and Task 2.</li><li>• "Task 1" related to "Task 2" (simple relation "Related to" added from "Task 1" important).</li><li>• "Task 2" has parent task is "Task 0"</li></ul> Now we need to specify parent task for "Task 1" and we select "Task 0". So RM says that "Parent task is invalid". Why ?  Hm, ok, lets deceive RM: <ul style="list-style-type: none"><li>• remove relation between "Task 1" and "Task 2"</li><li>• again link "Task 1" to "Task 0" by field parent task (linked, good)</li><li>• and again add relation between "Task 1" and "Task 2" (simple relation "Related to")</li></ul> Decive again: <ul style="list-style-type: none"><li>• remove relation between "Task 1" and "Task 2"</li><li>• add related to but from "Task 2"</li><li>• and link "Task 1" to "Task 0" by field parent task (linked, good)</li></ul> Why it happened: <ul style="list-style-type: none"><li>• issue.rb:validate_issue checks "@parent_issue.all_dependent_issues.include?(self)". And there is "self" issue, because in method gets all childs (Task 2) and gets all related issues by field issue_from_id "Task 2.relations_from.map(&amp;:issue_to)" and, of course, there is self issue.</li></ul> How to fix: exclude from method "all_dependent_issues" relations with type "TYPE_RELATES" (maybe and others dont want to check triggers in issue model) => "current_issue.relations_from.where('relation_type <> ?', IssueRelation::TYPE_RELATES)" This methods using only in 2 places: issue.rb:validate_issue and issue_relation.rb:validate_issue_relation  Our RM info: <ul style="list-style-type: none"><li>• database manager version - 5.5.45-MariaDB</li><li>• Ruby version - 2.2.1-p85 (2015-02-26) [x86_64-linux]</li><li>• Rails version 4.2.5</li><li>• Redmine version - 3.2.0.stable</li><li>• using plugins - none (clear install)</li></ul>
