

Redmine - Feature #21969

Add a wiki action to list (lost/hidden) pages which are not referenced in the parent page

Description	
<p>Wiki pages could be "lost" when you edit a page, i.e. when you remove the <code>[[page]]</code> marker in the parent page. Since Redmine has a redundant referencing system (<code>[[page]]</code> marker and the parent link), it could be easy to visit the wiki and tag pages which have a parent link but not referenced in the parent page (any <code>[[page]]</code> marker).</p> <p>We could also imagine to colourize these pages in the index or insert a warning in the wiki page.</p> <p>MoinMoin wiki has a such function to check for lost pages.</p>

This plugin implements this feature https://github.com/bluezio/redmine_wiki_backlinks/

It should be integrated in redmine.
