Target version:	Affected version: 2.6.2
Resolution:	
Description	
<p>Hi.I'm using redmine 2.6.2. I have created a custom field wich type is float. I want to use comma as decimal separator.</p> <p>But when i set locale to , pt or pt-BR, for instance, if the user inputs a float like '95,70' or '500,25' in a form input, numerical validation will yield an 'invalid_number' error, even though this is a valid format in Brazil.</p> <p>Only works if i use dot as decimal separator... but it is not the right way to do it.</p> <p>Is that a newer version of redmine that fix it ?</p> <p>How we that uses comma as decimal separator deals with with number formats in redmine?</p> <p>Thanks!</p>
