Category:	UI - Responsive	Estimated time:	0.00 hour
Target version:	3.2.1		
Description This patch adds a global reset for the max-widht attribute on mobile for input, select and textarea elements Without this reset i can happen, that form fields are wider than their container, e.g. because the attribute size was set. This is the case on the search page. Before: before.png After: after.png
