Redmine - Feature #22121

Add a quick search of projects in Projects page

Description

Hello.

When you have many projects and subprojects displayed on the Projects page, it takes time to identify and switch from one to another.

I'd like to suggest to add simply a search text field on top of the project list, which filters the project list using Ajax, both on project name and description.

Additionally, consider adding more optional filters based on the project's own fields, like status o creation date.

This is a must. Projects should be fully searchable just like issues are. We have over 350 projects and current "Projects" page is useless.
