Description

We do have several different workflows established for different projects. Since most of our guys here do have different roles in different projects, the workflow feature does not seem to work correctly. We still see Ticket Status, which are not used in the workflow for the role PRJ_NAME-Manager (just to make it easier, the PRJ_NAME is used in the Rolename).

I have tried it the other way around and added all Status to a Role which I do have as well (Manager), and now I do see all Status in the Ticket, even though I am not having the role "Manager" in this project.

Could be, that this is related to #20384.

We are using still:

Environment:
- Redmine version: 2.3.0.stable
- Ruby version: 1.9.2 (x86_64-linux)
- Rails version: 3.2.13
- Environment: production
- Database adapter: PostgreSQL

Redmine plugins:
- parent_issue_filter: 1.0.1
- redmine_ckeditor: 1.0.16
- redmine_people: 0.1.8
- redmine_tagging: 0.0.1

Just for clarification. During my tests, I assigned all Status to the user Manager, but in the project I am testing, I do not have this role. Therefore it looks like the role is not determined from the project, but all roles belonging to my users are used. This is IMHO plainly wrong.

#2 - 2016-03-07 15:50 - Markus May

Looks like this is because I am also registered as "admin". I guess, that this is the cause. Can anybody prove this?
