Description

Hello,

could you add gvSIG project to "Who uses Redmine?" wiki?

This is the brief description of how we use Redmine:

gvSIG is an Open Source Geographic Information System, translated to more than 25 languages and used in lots of countries.

For managing gvSIG project we use Redmine from some years ago. We have different projects in Redmine for every main gvSIG project/extension:

<https://redmine.gvsig.net/redmine/projects>

The main project is gvSIG Desktop: <https://redmine.gvsig.net/redmine/projects/gvsig-desktop>. From here we manage bugs, feature requests, add-on requests and wishlist (functionalities that we would like to add...). gvSIG users can register and upload the errors or suggestions to Redmine.

gvSIG is a Geographic Information System (GIS), that is, a desktop application designed for capturing, storing, handling, analyzing and deploying any kind of referenced geographic information in order to solve complex management and planning problems.

gvSIG is known for having a user-friendly interface, being able to access the most common formats, both vector and raster ones. It features a wide range of tools for working with geographic-like information (query tools, layout creation, geoprocessing, networks, etc.), which turns gvSIG into the ideal tool for users working in the land realm.

gvSIG is known for:

integrating in the same view both local and remote data through OGC standards.

being designed to be easily extendable, allowing continuous application enhancement, as well as enabling the development of tailor-made solutions.

being open source software, under GNU/GPL license, which allows its free use, distribution, study and improvement.

being available in several languages (Spanish, English, German, French, Italian,...)

being developed using Java, and being available for Linux, Windows and Mac OS X platforms

Thank you very much.

Best regards,

Mario Carrera

- Status changed from New to Needs feedback

- Assignee set to Mario Carrera

Thanks for the information. But Firefox and Chrome would not display <https://redmine.gvsig.net/> because the site uses a self-signed SSL certificate.

Could you please install valid certificate on the site? You can get certificates for free.

- [Let's Encrypt](#)
- [GlobalSign: Free SSL Certificates for Open Source Projects](#)

- *Category changed from Wiki to Website (redmine.org)*

#3 - 2016-03-15 13:34 - Mario Carrera

We were pending to do it. I've remembered it to the system administrators.

I'll let you know when it's fixed.

Thank you very much.

- *Status changed from Needs feedback to Closed*

Mario, I added your site to [WeAreUsingRedmine](#). As that page showcases redmine usage, please make sure that

- people can actually view your site without getting an SSL exception and
- you use a supported version of redmine - which version are you using?

#6 - 2016-04-04 06:51 - Toshi MARUYAMA

- *Tracker changed from Defect to Feature*

#7 - 2016-04-05 13:18 - Mario Carrera

Hi Jan,

thank you very much. System administrators are going to fix SSL problem, it's one of the next tasks that they have to do for all gvSIG domains this month.

In reference to the Redmine version, we are using 2.5.1.stable one. Is that correct?

Best regards,
Mario
