Description	
<p>Currently only these variables are supported/documented:</p> <ul style="list-style-type: none">• value => the custom field value• id => id of the customized object• project_id => id of the project of the customized object if defined• project_identifier => identifier of the project of the customized object if defined• m1, m2... => capture groups matches of the custom field regexp if defined <p>It would be nice to have another variable to identify the currently logged user. Either by passing the:</p> <ul style="list-style-type: none">• user id• the login name• the user's API access key <p>I would love to receive user's API access key -> The called webservice could use that key to access Redmine!</p>
