Description

Having worked with Redmine for a while, I now have many projects running. Some of them are active, other are not. Nevertheless, while I can search / filter issues by their custom fields, it cannot do the same with projects. It would be really helpful, if the "/projects" page could include filters and **allow sorting of projects** based on their **status**, as well as any **custom fields** that might have been added. The fields themselves do not have to appear in any list format, as long as the project's title and description are shown, for the filtered result.

I have searched for **existing plugins** and found one, yet **it does not appear to function** in version Redmine 3.x (https://github.com/splendeo/redmine_project_filtering). Ideally, this kind of filtering would become a core part of Redmine, however, a plugin would do - as long as anyone is able to maintain it. (Sadly I do not know ruby at all).

- Status changed from New to Closed

- Resolution set to Duplicate

I'm closing this ticket in favour of #29482 which contains a patch that adds the possibility to filter projects by status or by custom fields values.
