

Redmine - Defect #22408

How to get the data of a custom_field from the database

2016-04-06 12:55 - Tushar Garg

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		Affected version:	3.1.3
Resolution:	Invalid		
Description Let suppose I create a new custom field (is_addtoapplane) of type bool, if it is true then, at the time of project creartion, i am hitting a webservice and all the data of the project is saved on that webservice,but at the time of project creation, i am checking its value from params. But when I want to create a issue and want to add this issue to my another project applane, then I need the data of custom field(is_addtoapplane) for that project in which issue is being created, so that check can be performed.
