Description

Hello

I have Setup a Remine on Untuntu 14.04 LTS
The Setup is working fine and the Redmine Sitre is shown.

My Problem now is:

I have Backup from the older Version and did a restore of mysql and Redmine Files to the new Server.
I can not Login to the new Redmine.
I found out that i have to migrate the mysql database.

Can anyone tell me how i have to do that or can give me a Place where i can find i how to.

History
