

Redmine - Feature #22497

Sorting and displaying users is different order

Description

I tried to sort users (mainly in watchers list) in a different order than the order of displaying them. While users are to be displayed in the 'firstname lastname' order, I wanted to sort them by their lastname ('lastname firstname'), for example: "John Doe, Ann Smith" instead of the default sorting for this type of display "Ann Smith, John Doe".

I changed the order the ':order' field in /models/user.rb but it seems that it affected nothing - the users are still ordered according to the setting in ':string' field.

What does the ':order' do then?

Environment:

Redmine version	2.4.2.stable
Ruby version	1.9.3-p484
Rails version	3.2.16

Quickly looking at this i wonder it is [#40100](#).
ordering comes from sorted, but can be defeated later by any call to sort on collections.
