Redmine - Patch #2256

Allow commit messages to refer to issues in project ancestor tree, not just project

- Category set to SCM

#2 - 2011-01-19 16:15 - Bruno Medeiros

It's already this way.

I have a project A, with repository, and projetcs A1, A2, A3... A commit on A's repo can fix an issue on any subproject.

#3 - 2011-12-21 17:08 - Colin Mollenhour

Bruno, a commit in A1 cannot fix an issue in A2. In my case this is a problem, mainly due to restrictions caused by the strict 1-1 relation between repos and projects. #9703 would allow for fuller control over this though.

Colin, starting from Redmine 0.9.2 commits are able/allowed to reference (and fix) issues of parent projects and subprojects. Just as Bruno already said.

#5 - 2011-12-21 17:33 - Mischa The Evil

- Status changed from New to Closed

Feature already implemented with r3357 for issue #4674, which was included first in Redmine 0.9.2.
