Target version:	Affected version: 3.2.1
Resolution: Invalid	

Description

Hi !
I try to follow the Rails documentation to intercept email on dev and staging environment

http://guides.rubyonrails.org/action_mailer_basics.html#intercepting-emails

But it doesn't complatly works, the mail is send to sandbox@example.com but also to the original recipient.

When I use byebug just in the first line of the self.delivering_email method message.to is empty.

```
[1, 7] in /Users/jbertrand/workspace/redmine_silicon/lib/mail_interceptor.rb
1: class MailInterceptor
2:   def self.delivering_email(message)
3:     byebug
=> 4:     message.subject = "[for: #{message.to.to_s} from: #{message.from.to_s}] #{message.subject}"
5:     message.to = ['test+redmine@siliconsalad.com']
6:   end
7: end
(byebug) message.to
(byebug) message.to.inspect
[]
```
