Description

I think this request should be following the private issue request.
When creating an issue, we cannot assign to a group people to only allow this group people see, update, modify this issue.
This should apply to a single user too.

How about create an option "Public or Private" when assign an issue to one person or a group people?
If Public, means this issue can be viewed by others.
If Private, Only people in the assignment group/list can view it.

This like the public private project options.

#2 - 2016-09-13 17:33 - Benjamin Schunn

I think it should be possible to assign an issue to a group of people. I had the problem several times my users are thinking they should not work on the issue because it is not assigned to them but a teammate. If I want that several people work an an issue, it should be possible to assign that issue to them.

#3 - 2016-09-13 18:27 - Toshi MARUYAMA

- Category changed from Permissions and roles to Issues

- Status changed from New to Closed

- Assignee deleted (Jean-Philippe Lang)

"Ability to assign issues to groups" was implemented by #2964.
"Ability to assign issues to multiple users" is #12579.
