# Redmine - Defect #2311

## r2097 breaks issues layout

2008-12-10 16:16 - Rodrigo Rosenfeld Rosas

Status:	Closed	Start date:	2008-12-10	
Priority:	Normal	Due date:

Target version:				
Resolution:	Fixed	Affected version:	Affected version:	
Description				

### Description

Since <u>r2097</u> stylesheets/application.css change, the issues page is not rendered correctly when the content is too large. Before the patch, the content had scrollbars.

Updating stylesheets/applications.css to r2046 (last change before r2097), the problem is gone.

Removing "overflow: auto" from #content was the cause of the problem.

Here is the suggested patch.

#### History

#### #1 - 2008-12-15 19:09 - Jean-Philippe Lang

I don't really see how <u>r2097</u> can affect this. Can you provide an example please? By the way, is it the issue list or the issue detail view that is affected?

The affected part that I noted was the tickets list when the table has lots of columns (fields). I've tested both in Opera and Firefox. The suggested patch worked for me. I always use the svn last version on my production system, so I've noticed just after the <u>r2097</u> commit. Applying the patch solved for me.

Please, take a look at the above link for information about the overflow property and how it is related to scrolling: http://www.w3.org/TR/CSS21/visufx.html#propdef-overflow

#### #3 - 2009-12-18 00:08 - Mischa The Evil

- Category changed from Issues to UI
- Status changed from New to Closed
- Priority changed from Urgent to Normal

- Resolution set to Fixed

Fixed in <u>r3177</u>.
