Redmine - Patch #232

SCM URL/ROOT Information on Repository Page

2007-10-04 15:22 - Brian DeGregorio

Target version:			

Description

To save users the hassle of hunting down the Admin to ask the access information needed to use a non-redMine SCM tool
i.e. TortoiseSVN I've integrated the settings information into the Repository page.

File is a unix patch.

The using of Table for view information is not realy good for
a web application. You show a list of thing, so it's better to
see by list with <ul> and <li> value.

#2 - 2007-10-09 11:00 - Brian DeGregorio

I used the table to match the other 3 tables on the page.
Wouldn't be hard to change it but then it would look out of
place with the other 2 boxes.

#3 - 2009-12-09 03:23 - Holger Just

I created a simple plugin which implements the functionality of the patch. Additionally, the displayed URL is configurable in the admin interface.

The plugin can be found at http://dev.holgerjust.de/projects/redmine-checkout/wiki

+1

Looks like the aforementioned plugin (which provided just the right features) has been abandoned and no longer works with never redmine versions.

#6 - 2012-10-24 12:59 - Wojtek …

+1
given that the mentioned plugin does not nor will not work with Redmine 2.0 (please see: Redmine 2.x support which states: "redmine_checkout is not compatible with Redmine >= 2.0 right now and it probably never will.) and the Feature #4567 is somehow stagnant.

It was also convenient to have configuration page with substitution options on per SCM basis.

Is there an alternative with redmine 3.0?

#9 - 2018-03-28 08:23 - Grigoriy Vasilchenko

Alternative: https://www.redmine.org/plugins/redmine_scm_path_view
