Category: Custom fields	Estimated time: 0.00 hour
Target version: 3.4.0	
Resolution: Fixed	
Description	
<p>This pertains to the change applied in #10412#note-16.</p> <p>Custom fields of the type version can also have filters and can be rendered as a select menu for editing, both are currently rendered with the project name and without grouping, as well as not ordered (case in point the Affected version field to create this issue has "3.3.0" then "2.6.9", "3.0.7" and "3.1.3").</p> <p>We had thought about adding the project in the name and adding a third element in the inner arrays with the status name in source:/trunk/lib/redmine/field_format.rb@15606#L823, and to implement a similar switch whether the inner arrays have 2 or 3 elements in source:/trunk/lib/redmine/field_format.rb@15606#L541 as is done in Javascript for the filter. This would however impact everything using Redmine::FieldFormat::VersionFormat#possible_values_options, for example #value_from_keyword which would only recognize version by "project name - version name", and so on.</p> <p>We would be willing to propose a patch but are unsure what degree of change is acceptable here.</p>

- Subject changed from Adapt custom field type version filter and selector to same rendering as core version filter to Group versions by status in

version custom field filter

- *Status changed from New to Closed*
- *Assignee set to Jean-Philippe Lang*
- *Target version set to 3.4.0*
- *Resolution set to Fixed*

Done in r16194. Filters for version custom fields are now group by status just like the standard "Target version" filter.
