

Redmine - Feature #23289

Allow adding child issues with UI similar to "add 'related'" function.

Description	
<p>In the issue page one can add related issues by entering issue number.</p> <p>However, 'Add button' under 'Child issues' goes to create a new issue rather than allowing to add pre-existing issue. Currently if the issues already exists and if I have to add a one or more issues as a child issue of current issue there is no way - I have to go to the individual child issues, update the issue with parent issue field.</p> <p>A better way could be to have 'Add' and 'New' should be available under child tab.</p>
