Category:	Email notifications		**Estimated time:**	0.00 hour
Target version:				
Resolution:			**Affected version:**	3.3.6

Description

It seems that Redmine version 3.3.0 has broken links generation in email notifications for news (at least), with 3.2.0 noone was reporting such problem.

I have a news publish that includes following description:

```
New software version#1267 has been released. It is ...

{{include(myproject:100-0_Alpha_2_(rev_93029))}}

h3. Feel free to report new issues

* "myproject":/redmine/projects/myproject/issues/new
```

In email notification

- the first link to version#1267 has been generated correctly,
- the last one is missing server name that should be added automatically:
  http://redmine/projects/myproject/issues/new but should be http://host/redmine/projects/myproject/issues/new

Included wiki (myproject:100-0_Alpha_2_(rev_93029)) is in different project then the news and includes:

```
h3. Requirements

* Service Pack version#1272 or newer

{{include(myproject:Update_Instruction)}}

...
```

In email notification

- the link to version#1272 has been generated wrong, it is missing server name:
  http://redmine/versions/1272 but should be http://host/redmine/versions/1272

Included wiki (myproject:Update_Instruction) is in different project then the news and includes:

```
h3. Download

All pre-production software releases are available on the "shared network location":file://host\fu
ll\path\to\directory.

...
```

In email notification

- the link to "shared network location" has been generated wrong, all "\" has been replaced with a code %5:
  file://\host%5full%5path%5to%5directory
  the link does not work and for some reason, it is not even possible to copy it from Outlook into clipboard

```
Environment:
  Redmine version                3.3.0.stable
```

```
  Ruby version                    2.1.8-p440 (2015-12-16) [i386-mingw32]
  Rails version                   4.2.6
  Environment                     production
  Database adapter                Mysql2
SCM:
  Subversion                      1.8.11
  Git                             2.7.4
  Filesystem
Redmine plugins:
  computed_custom_field           0.0.2
  inside_avatar                   1.0.2
  issue_filters                   1.0.1
  redmine_agile                   1.4.1-3
  redmine_checklists              3.1.1-1
  redmine_custom_columns          1.1.0
  redmine_favorite_projects       2.0.2-2
  redmine_version_fixed_issues    1.0.1
  sidebar_hide                    0.0.7
```

History

If I change the "Host name and path" (in application settings / General tab) to the host name only e.g. host, then all links are wrong. Correct setting is host/redmine.

Also, please note, that some links are OK, and some are NOT OK.

#3 - 2016-12-14 18:57 - Sebastian Paluch

Any chance to take a look on this?

#4 - 2017-12-19 21:25 - Sebastian Paluch

Can I provide more information to speed this up?

What is OK and NOT OK?

I have described in details what is OK and what is NOT OK in the issue description.

#7 - 2018-02-01 15:33 - Toshi MARUYAMA

- Subject changed from Broken links in email notification to Loose hostname/path in news email notification including wiki

- Status changed from Needs feedback to Confirmed

- Affected version changed from 3.3.0 to 3.3.6

#8 - 2018-02-01 15:38 - Toshi MARUYAMA

- Subject changed from Loose hostname/path in news email notification including wiki to Lose hostname/path in news email notification including wiki
