**Description**

Hi,
One way to speedup the issue's show view is load the form in a async way. So, when the user click on an issue, he will see first the issue info. In background, redmine could load the form for when user click in edit, the form be there.

This will cut the time to load the by half

**History**

**#1 - 2016-07-20 15:55 - Victor Campos**

Another point of clamping is the retrieve query for next/previous issue, it took 400ms+- here
