Description

Hi,
i use the following syntax to add an inline image with CSS style on a wiki page (as described on [RedmineTextFormattingTextile > inline images](#)):

```
!{width: 60%;border: 3px solid green}myface.png!
```

when i try to export the page to PDF (with the standard link at the bottom of the page), the image is not displayed on the resulting document! only a textual reference to the attached image file is shown (at the bottom of PDF)

if i remove the CSS style from inline image syntax, it works!!

```
!myface.png!
```
