

Redmine - Feature #2350

Support redmine link syntax in search box

2008-12-17 01:08 - Brad Schick

Status:	New	Start date:	2008-12-17
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Search engine	Estimated time:	0.00 hour
Target version:			
Resolution:			
Description It would be very helpful if I could go directly to a revision, issues, commit, or source file by typing the wiki link syntax into the free-text search box at the top of a project. Currently only jumping to issues works with #NNN, but it would be very helpful if all of the following navigated directly to their targets: #12 r43 commit:f30e13e43 source:some/file It seems unlikely that these would mask real free-text search strings, but if that is a concern using quotes could always force a normal free-text search.			
Related issues: Related to Redmine - Defect #3627: Can't search for numbers e.g. error codes Closed 2009-07-16

For issues only, currently you can even omit the "#". So NNN, followed by an <enter>, in the project searchbox is sufficient to go straight "into" the issue...

[...] directly to their targets:

[#12](#)

Since issues are "the heart of Redmine" I'd like the current behaviour of **not requiring** the "#" to go straight to the issue. Though, if the "#" is optional (as it is currently) I can live with it... ;)

[...] directly to their targets:

[r43](#)

+10... I see myself using it alot already... Makes me :smile:

[...] directly to their targets:

- commit:f30e13e43
- [source:some/file](#)

These two seems a bit of overkill IMO. Are you frequently going in "so deep into detail" straight from the repository main page? Personally I don't but YMMV :)

Note: for Git-users this would be much more needed than for SVN-users...

#2 - 2008-12-18 01:04 - Brad Schick

Certainly issues and revisions are the most important. The other direct links are just gravy, but I see little reason to not support them. It's how I expected the search field to behave when I tried it the first time.

#3 - 2008-12-21 14:43 - Mischa The Evil

- File `add_quickjump_to_changeset_in_search-r2147.diff` added

The fact that such a feature gives me a big smile on my face triggered myself to hack this into Redmine.

I'll attach a quick-n-dirty patch which implements numeric-changeset quickjump-functionality into the searchbox. This feature is:

- included at **project-level only** (thus only looking for changesets in the current-project's repository)
- ignoring tried quickjumps on projects without a repository attached (thus does a regular search with the given search string)
- ignoring tried quickjumps to non-existant changesets (thus does a regular search with the given search string)
- requiring the following syntax in the searchbox:

`rNNN`

where NNN needs to get substituted by the numeric changeset-id (note that the **r** is **required** here)

- not supporting the non-numeric changeset hashes used by e.g. Git (commit:HEX-ID)

Please note that this patch is created by trial-and-erroring with a useful outcome on my personal environment (Redmine [r2147](#) + SVN 1.5.x). YMMV! :-)

#4 - 2016-09-13 17:23 - Benjamin Schunn

This is already implemented and could be closed.

#5 - 2016-09-13 19:14 - Toshi MARUYAMA
