Description

As discussed in this [thread](#) it would be quite useful if one could configure the contents of the info header of the notification mails that redmine sends out.

/app/models/mailer.rb

```
redmine_headers 'Project' => issue.project.identifier,
                 'Issue-Id' => issue.id,
                 'Issue-Author' => issue.author.login
redmine_headers 'Issue-Assignee' => issue.assigned_to.login if issue.assigned_to
```

Looking at this file, adding the option to add custom fields seems not that hard to implement, while adding the option to change/remove the default headers seems to need a more complex rewrite of the implemented functionality. Still implementing the custom additional fields option would be quite nice.
