Target version:

Resolution: Invalid Affected version:

Description

Hello and greetings

I have a problem with redmine receiving emails.

when I run the command in windows 7 in my company

*bundle exec rake redmine:email:receive_imap RAILS_ENV=production host=imap.gmail.com port=993 ssl=1 username= foo@gmail.com password=foo allow_override=all unknown_user=create

I get the error:

*Socket Error: getaddrinfo: no such host is known.

does someone know how to solve this
