E:\RedMine>@

Anyone recognise this?

Tried updating first ... then pulled a the latest svn to a new folder and re-installed all the software (ruby, gems etc)

Cgeers
```

History

#1 - 2008-12-20 08:39 - Bernd Lommerzheim

Hey Jonathan Hall,

that's not a update problem.

The WEBrick server tries to bind tcp port 3000 and fails with a "permission denied" error. Maybe your current user is not allowed to bind that port or ports in general. Or maybe the port is in use by an other application but then there should be an other error (port is in use). You have to find out why your current user can not get that port. You can try to start the server on an other port (e.g. "-p 5000").

```
[2008-12-20 11:55:39] WARN TCPServer Error: Permission denied - bind(2)
```

| E:/Ruby/lib/ruby/1.8/webrick/utils.rb:73:in `initialize': Permission denied - bind(2) (Errno::EACCES)

Good luck.
