Description

I would like to be able to forward or cc an email to the account used by my Redmine instance, include:

...

Issue: [#123](#)
Project: Bar
...

And have the correspondence appended to issue [#123](#) in project bar. Right now, I need to change the subject line to `Re: [Task [#123](#)]` in order for the email content to be appended to issue [#123](#) instead of having a new issue created.
