<b>Description</b> Hello, We have redmine with 500 projects, and if one user non admin try to load a page it will get rendered in 4-5sec An admin render the same page in 1 - 1.5 sec This is a huge difference. I have made some investigation it is caused by project#allowed_conditions I have try to make some indexing on projects, trying to improve performance but with the same result I found that project table is called multiple times so if we can find a better solution I have made a plugin but need but still having no good result) <a href="https://github.com/bilel-kedidi/redmine_performance">https://github.com/bilel-kedidi/redmine_performance</a>  Thanks for helping
