Description	
<p>Hello,</p> <p>We have redmine with 500 projects, and if one user non admin try to load a page it will get rendered in 4-5sec An admin render the same page in 1 - 1.5 sec This is a huge difference.</p> <p>I have made some investigation it is caused by project#allowed_conditions I have try to make some indexing on projects, trying to improve performance but with the same result I found that project table is called multiple times so if we can find a better solution I have made a plugin but need but still having no good result)</p> <p>https://github.com/bilel-kedidi/redmine_performance</p> <p>Thanks for helping</p>
