Redmine - Defect #24052

Unable to select columns in Administration, Settings, Issue Tracking, Default columns displayed on the issue list

2016-10-11 22:04 - Eric Ross

Status:	Closed		**Start date:**	
Priority:	Normal		**Due date:**	
Assignee:			**% Done:**	0%
Category:	Administration		**Estimated time:**	0.00 hour
Target version:				
Resolution:	Invalid		**Affected version:**	3.3.0

Description

I recently installed 3.3.0.stable on Centos 7 on Amazon EC2. Everything seems to work except for 2 issues - selecting the default columns and importing. Initially, some columns were showing under "Selected columns". All could be removed except for "Priority". Now no columns can be added.

There are no errors in the Apache logs or production.log. Clicking on the arrows in the Issue Tracking screen does not trigger any logging either in production.log.

Redmine 3.3.0.stable - checked
Default administrator account changed - checked
Attachments directory writable - checked
Plugin assets directory writable (./public/plugin_assets) - checked
RMagick available (optional) - checked
ImageMagick convert available (optional) - checked

Here are the version numbers:

Database: MariaDB-server-10.1.18-1.el7

Environment:
Redmine version   3.3.0.stable
Ruby version   2.3.1-p112 (2016-04-26) [x86_64-linux]
Rails version   4.2.6
Environment   production
Database adapter   Mysql2
SCM:
Git   1.8.3.1
Filesystem
Redmine plugins:
redhopper   1.0.4

History

#1 - 2016-10-12 06:01 - Toshi MARUYAMA

- Status changed from New to Needs feedback

I cannot reproduce on vanilla Redmine 3.3.1.
Try without plugin.

#2 - 2016-10-12 14:50 - Eric Ross

Sorry, I forgot to mention that the problem occurred before adding the plugin. I just removed the plugin anyway, but the problem still occurs.

#3 - 2016-10-13 06:28 - Toshi MARUYAMA

No idea. Redmine does not support MariaDB.

#4 - 2016-10-14 02:16 - Eric Ross

I upgraded to 3.3.1 and replaced MariaDB with MySQL (mysql-community-server-5.6.34-2.el7.x86_64), but have the exact same problem. I've had to install most things like Ruby, gems, and bundle as root. It warns against running as root, but it doesn't seem to work any other way. Could that be the cause of the issue? It's been difficult to find documentation that works correctly.

#5 - 2016-10-17 19:35 - Eric Ross

All plugins have been removed.

Using Passenger 5.0.30

#6 - 2016-10-17 19:59 - Eric Ross

I was using the following Apache setting recommended by some security sites. This causes the above issue.

Header always set Content-Security-Policy "default-src 'self'; script-src 'self' 'unsafe-eval'; style-src 'self' 'unsafe-inline'; frame-src *; img-src *; font-src 'self' data:; media-src *; connect-src *"

#7 - 2016-10-18 05:29 - Toshi MARUYAMA

- Status changed from Needs feedback to Closed

- Resolution set to Invalid

Thank you for your feedback.
