[#23964#note-1](#)

Why do you use such very old Ruby?

[#23964#note-3](#)

I recommend you to use rvm or rbenv instead of package ruby.

#2 - 2016-10-20 15:23 - Pavel Potcheptsov

I use rvm with this ruby version because of no issues so far.

```
# rvm list

rvm rubies

=* ruby-1.9.3-p327 [ i686 ]

# => - current
# =* - current && default
# * - default
# rvm -v
rvm 1.25.30 (stable) by Wayne E. Seguin <wayneesequin@gmail.com>, Michal Papis <mpapis@gmail.com> [https://rvm.io/]
```

Do you suggest to update ruby with rvm?

#4 - 2016-10-21 09:38 - Pavel Potcheptsov
I have updated to

Ruby version 2.3.0-p0 (2015-12-25) [i686-linux]

and realized that Forums tab works once you add forum name in setting;) Then I checked this with my current ruby-1.9.3-p327 installation and found out that it was just a my mistake. Everything works! Sorry for the noise.
