<b>Description</b> <p>There is a really nice report available at /reports/issue_report/projectID that would be very useful to have on a global level. I noticed this exact report contains project specific information that would make it difficult to do globally, but if the project specific information was removed it would still provide a lot of useful information.</p> <p>In particular, it would give a good overview of how many things are assigned to each user of the system and could even contain summary data for each project (number of tickets, open/closed, etc). This is a piece of information that was easily available, with drill downs, in Trac and is sorely missed.</p> <p>Would this be something that could be added?</p>
