Description			
<p>There is no way right now in Redmine to track when a certain user was added or removed to a project. It is suggested to add this feature:</p> <ol style="list-style-type: none">1. Add 'Membership' activity category;2. Once new user is added to a Project, reflect this in Activity Log as 'New team member <Name> has been added in role(s) <Roles list>';<ol style="list-style-type: none">1. Once set of roles has been changed for a user, reflect this as well;2. Indicate if a user has been removed. <p>This should be helpful to see new people coming and going to a project to encourage collaboration, and also perform some level of security audit (not complete, as role definitions can be changed, but still better than nothing).</p> <p>Given that people are not added/removed that frequently, it should not introduce too much burden in terms of extra data storage required to keep track of these activities.</p>
