

Redmine - Patch #243

Patch for Feature 16645 - Wiki Page Hierarchy and Breadcrumbs

2007-12-27 13:46 - Ron Monson

Status: Closed	Start date:
Priority: Normal	Due date:
Assignee:	% Done: 0%
Category: Wiki	Estimated time: 0.00 hour
Target version: 0.8	
Description This patch allows you to assign a parent page to each wiki page creating a parent/child relationship. When used, breadcrumbs or backlinks will be displayed at the top of the wiki page allowing you to jump to any page in the hierarchy. Also included is a Error executing the child_pages macro (With no argument, this macro can be called from wiki pages only) link which will render all of the child pages for any given page. See the feature request for screenshots.

Trying to apply that.. Didn't work.. :-(

The log says:

```
ActionView::TemplateError (undefined method `parent_id' for #<WikiPage:0x20dc5bc>) on line #4 of wiki/show.rhtml:
```

I have Redmine version 7.0_rc1

#2 - 2008-07-26 13:49 - Jean-Philippe Lang

- Category set to Wiki

- Status changed from New to Closed

- Target version set to 0.8

Functionality added in [r1698](#). See [#528](#).
