Description				
At our company	we have the following scenario:			
<ul> <li>I add a mile</li> <li>I create tick</li> <li>I regularly n</li> <li>if the spent <ul> <li>the cus</li> <li>I create</li> <li>I copy</li> <li>I close milesto</li> </ul> </li> </ul>	ets and assign them to this milesto eed to check the milestone : <i>settin</i> time approaches 200h stomer has to issue a new PO (let's e a new milestone, e.g.: <i>m2: 150h</i> all open tickets which are assigned all of the original tickets (still assig one	in the name of the milestone: <i>m1: 20</i> ne <i>gs -&gt; milestone -&gt; Spent time</i> s assume the customer orders 150h) d to the milestone <i>m1</i> and assign the		
This is pretty awl	Kward.			
		this can be accomplished with a ded is approached (maybe variable settir		
Proposal:				
<b>DO</b> 1	igned to a project			

- a ticket can be related to several POs of the project
- one of the related POs has to be selected to be the active PO where the hours are booked
- if the set contingent of a PO is reached and a user tries to log time to a ticket where this PO is set as *active* PO, he gets an error message to use a new PO
