Category:		**Estimated time:**	0.00 hour
Target version:			
Resolution:	Invalid	**Affected version:**	

Description

Hi,

I'm new to Redmine.

Everything is working except 'View differences' when browsing SVN repository. The result is always empty.
Tried with latest stable 3.3.1 and latest from trunk - same result.
But when I try to download a Unified diff it works. I get the file and I see the data.
I don't see any errors in the log.

History

#1 - 2016-12-08 22:19 - Akan Tortz

- Status changed from New to Resolved

There was a predefined diff-cmd for subversion set to a custom diff command. Removing it fixed the issue.

#2 - 2016-12-21 05:27 - Go MAEDA

- Status changed from Resolved to Closed

- Resolution set to Invalid

I am closing this issue.
Thank you for reporting.
