

Redmine - Defect #24570

Migrating from Trac to Redmine [Trac2Redmine]

2016-12-09 12:49 - F B

Status:	New	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Importers	Estimated time:	0.00 hour
Target version:		Affected version:	3.3.1
Resolution:			
Description			
<p>Hello everyone, I used to work on a project about migrating our system from trac to redmine.</p> <p>This summer at my first attempt I was able to migrate some parts of our bug tracking database.</p> <p>jIXOU</p> <p>But, know I see that there is a new stable releases, I want to migrate completely this time.</p> <p>Is there anyone who accomplished migration completely?</p> <p>*at the attachment you can see my migrate_from_trac.rake file, which is edited due to: -self.inheritance_column = :none instead of set_inheritance_column :none -self.primary_key = 'name' instead of #set_primary_key :name -correcting the rake file according to *timestamps patch</p>			

History

#1 - 2017-01-02 17:47 - Toshi MARUYAMA

- Category changed from *Issues* to *Importers*

#2 - 2018-06-21 15:50 - Rich James

Latest one I can find is: https://github.com/akohlbecker/migrate_from_trac.rake

However, I still can't get it to work (using either Ubuntu 16.04 or 18.04).

There are various versions available from: <http://www.redmine.org/issues/20943>

The only way I've managed to get a successful migration (and I've only managed to get it to migrate one Trac instance; trying a second gives primary key violations from the DB back end), and that was to use: https://github.com/eLvErDe/migrate_from_trac.rake/blob/master/migrate_from_trac.rake
Using that script only worked when I spun up an Ubuntu 14.04 virtual and did the migration there.
