Description

When exporting a wiki page in HTML (using /projects/id/wiki/title.html), if some text is hidden in a {{collapse}} macro, then the exported page doesn't allow to click on the link to see the text.

Steps to reproduce the bug

1. Create a wiki page in a project with some text:

   ```
   h1. This is a test

   {{collapse(Click to show/hide)
   This is hidden.
   }}
   ```

2. Try to export this page as HTML

   ```
   curl https://server.ext/projects/project_id/wiki/Title.html > page.html
   ```

3. Open the HTML page. If you click on the "click to show/hide" link, nothing appears.

Possible causes

This is obviously due to the fact that the JavaScript used by the {{collapse}} macro isn't exported with the HTML page. Perhaps it could be easily added, like the CSS code which is already exported.
