Redmine - Feature #2461

Update select function on lib/tabular_form_builder.rb to allow for :label option

2009-01-07 17:53 - Blake Bigelow

Target version:	0.9.0		
Resolution:	Fixed		

Description
The class TabularFormBuilder has a function select(..) that will build a select tag and automatically put in a label for you. The only problem is that you cannot specify your own label text. If you do check_box on the same class it will look for the option :label and use that as the label text.
