Description Hello, In my company we're actually using (recently) a project called "Bugtrack" which have different subprojects for different products/specific cases, before adding new issues, support team have to perform a search to see if the bug hasn't been reported yet. The actual problem is that we want to search on the main project "Bugtrack" to search in any subproject of this one but we can't. A feature that allows with an option or whatever to search in a project and his subprojects would be very helpful to us ! Maybe other users are interested by this feature ? Thank you ! Arnaud			
Related issues: Is duplicate of Redmine - Feature #9909: Search in project and its subproject... Closed			

History

- Status changed from New to Needs feedback

I think that the feature [#9909](#) fulfill your request, doesn't it?
Please try Redmine 3.4.

Hi,

Sorry for the (very) late answer, yes it corresponds to my needs !
You can close (as I cannot) this issue.

Thank you
