

Redmine - Defect #24831

undefined method `require_sudo_mode' for EmailAddressesController:Class

2017-01-14 20:51 - Ben Senior

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		Affected version:	
Resolution:	Invalid		
Description			
<p>When upgrading (finally) from 2.5.2 to 3.3 on debian 8 (mysql Ver 14.14 Distrib 5.5.40) using apache2 and passengers, I get the following error:</p>			
<pre>Web application could not be started undefined method `require_sudo_mode' for EmailAddressesController:Class (NoMethodError) /usr/share/redmine/app/controllers/email_addresses_controller.rb:21:in `<class:emailaddressescontroller>' (required)>'="" ...<="" `<top="" `require'="" active_support="" app="" controllers="" dependencies.rb:247:in="" email_addresses_controller.rb:18:in="" lib="" pre="" redmine="" ruby="" share="" usr="" vendor_ruby=""></class:emailaddressescontroller>'></pre>			
<p>I can see that I have a sudo_mode.rb in /usr/share/redmine/lib/redmine but this doesn't seem to be getting included.</p>			
<p>I installed redmine from https://svn.redmine.org/redmine/branches/3.3-stable</p>			
<p>In fact, here are exactly the steps I took :</p>			
<pre>sudo apt-get update sudo apt-get upgrade cd /usr/share/ #Lets keep a copy of the old one sudo mv redmine redmine-2.5.2-old sudo svn co https://svn.redmine.org/redmine/branches/3.3-stable redmine sudo chown -R www-data:www-data redmine cd redmine #copy the old config sudo cp /etc/redmine/default/database.yml ./config/ #upgrade the bundle sudo bundle install sudo RAILS_ENV=production bundle exec rake db:migrate</pre>			
<p>Is this a problem with the packaging, or am I doing something wrong? :-/</p>

- *Status changed from New to Closed*
- *Resolution set to Invalid*

Please contact debian team. We don't provide any packages.

#2 - 2017-01-15 08:00 - Ben Senior

- *Status changed from Closed to Reopened*

Sorry, I used the wrong nomenclature. It was a hard day and I wasn't thinking straight. As I mentioned, I installed redmine from SVN, not from a debian package. It's a clean checkout from <https://svn.redmine.org/redmine/branches/3.3-stable>.

The sudo_mode module appears to be there in the code base, but it doesn't seem to be getting properly included. Isn't this more likely to be a problematic include somewhere in the redmine code base? Unfortunately, Ruby isn't my strong suit at all.

- *Status changed from Reopened to Closed*

Please use forum for question.

Why did not you remove package from your OS?
