

Redmine - Defect #24840

LDAP: Users who didn't login yet, are not accesible (and groups where no user has logged in yet aren't available as well) to assign to a project

Target version:		Affected version:	3.1.1
Resolution:	Duplicate		
Description			
<p>Hello,</p> <p>we are using Redmine for our organisation and have a central User Directory (Active Directory).</p> <p>It was easy to set up the authentication process against the LDAP. Unfortunately it is not possible to add users or groups which did not performed a login before.</p> <p>So essentially every time a user shall be assigned to a project (not to a ticket) the user has to be created in the AD (in the proper group), than e-mailed to try to login and after that we can assign his groups or login to a new project.</p> <p>This is really cumbersome and IMHO somehow illogic.</p> <p>Any user and group of the AD should be available in the project assignment as soon as it can be found in the directory.</p> <p>I certainly would love to be able to assign tasks to any user who is assigned to a project as well but I can understand if that is not possible.</p> <p>Though, the users definiely should be available in the user search regardless of any login attempts. In the end that's one of the major reason why we use a LDAP/AD, isn't it? I guess this kind of request is quite normal though I couldn't find any existing (open or close) ticket regarding this issue - sorry if I didn't look at the right place.</p> <p>Can you give me a hint how to change that behaviour, implement it myself or can you provide a timeline when you can provide that yourself?</p> <p>Thanks a lot,</p> <p>JT</p>
