Target version:			
Description			
Hello!			
According to my experiences, if the "content" DIV contains floating elements (float: left or right), then it's height not grows to the really content, the height value will be the "min-height" property in application.css. In IE7 it looks good, but in FF3, Safari, Chrome not.			
If I add the <div style="float:none;clear:both;display:block;"></div> line to the base.rhtml before the "</content>" closing tag, it will be good.			

History

this should be no problem anymore and could be closed I think.

#2 - 2016-09-13 17:24 - Toshi MARUYAMA

- Status changed from New to Closed

Too old.
