Redmine - Patch #25114

Context menu positioning inside positioned DOM elements

2017-02-17 14:23 - Serge Galanin

Target version:	Candidate for next minor release		

Description

In my theme the #content element is positioned relatively. It leads to an incorrect positioning of the context menu wich living inside the #content. A most simple fix is to bubble the context menu up to the top of DOM. Can we use this way?

Patch based on [r16333](#).

History

- File 0001-fix-context-menu-positioning.patch added

#2 - 2017-10-16 11:22 - Pierre Maigne

I applied this patch today (Redmine 3.4.3), as I also noticed that the context menu always appeared incorrectly away from the mouse pointer. The behavior is now has expected.

This very simple patch should be considered but a future release of Redmine.

Thank you Serge.

#3 - 2017-10-16 17:14 - Mischa The Evil

- Status changed from New to Needs feedback

- Target version set to Candidate for next minor release
