## Description

In markdown formatting, pre-block by ``` including # derives incorrect wiki editable-sections.

Example:

```markdown
# H1

## H2

```pre-block

```markdown
### H3

Editing section "H2":

```markdown
## H2

```...

```markdown
### H3

As above, # in pre-block is treated as markdown header.

**NOTE** pre-block by ``` does right results.

```markdown
# H1

## H2

```
Editing "H2":

```
## H2
```

```
## pre-block
```  

```
## H3
```  

and editing "H3":

```
### H3
```  

I attached a fix patch.
