Description

Hi all,

I have successfully installed redmine 3.2.0.
In my company we use Active directory authentication. Users are inside its department OU.
So, We are having problem to authenticate users that are inside a OU.

Can you help me to authenticate users that are inside other OU than default Users OU?

History

#1 - 2017-03-14 04:51 - Toshi MARUYAMA

- Category changed from Accounts / authentication to LDAP

- Status changed from New to Closed

- Resolution set to Invalid
