

Redmine - Defect #25563

Remove is_binary_data? from String

2017-04-10 10:34 - Dmitry Lisichkin

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Code cleanup/refactoring	Estimated time:	0.00 hour
Target version:	3.4.0	Affected version:	
Resolution:	Fixed		
Description			
Method is_binary_data? was removed from String class in ruby 1.9.2 https://apidock.com/ruby/v1_9_1_378/String/is_binary_data%3F			
Then it was returned to String by redmine in 'rails 3.2' branch (r9475)			
It cause problem with ruby-debug-ide gem: https://github.com/ruby-debug/ruby-debug-ide/blob/ce3dbe0a76e11f34abf60740b7c88b23a1c3b5bf/lib/ruby-debug-ide/xml_printer.rb#L355			
Almost all non-ASCII strings in debugger shown as [BinaryData]			
I'll prefer remove that method at all but it used by SCM system. It is a very old code (r5204) and I don't know about it is actual for now days.			
But you can just rename that method to something different (see patch)

It is a very old code ([r5204](#)) and I don't know about it is actual for now days.

For example, [source:tags/3.3.3/test/functional/repositories_git_controller_test.rb#L448](#) .

It cause problem with ruby-debug-ide gem:
https://github.com/ruby-debug/ruby-debug-ide/blob/ce3dbe0a76e11f34abf60740b7c88b23a1c3b5bf/lib/ruby-debug-ide/xml_printer.rb#L355

I don't know about ruby-debug-ide, but it seems this code can be removed if ruby-debug-ide does not support Ruby 1.8.7.

Because it comes from
<https://github.com/ruby-debug/ruby-debug-ide/commit/81aa3f9b66b65f02cea84945c6109e1bbe39ad66> .

Almost all non-ASCII strings in debugger shown as [BinaryData]

I think it is expected behavior of ruby-debug-ide on Ruby 1.8.

I think that ruby-debug-ide IS support old Ruby

Toshi MARUYAMA wrote:

And this is not a problem because there is not so much people that work with this fossil=)

Problem in redmine code

I only say that the monkey-patching of core Ruby classes is not a good idea.

I spent some time yesterday and found that `is_binary_data?` method was removed only in 2.0.0 with replacement `syck-engine` to `psych-engine`

https://github.com/ruby/ruby/blob/ruby_1_9_3/ext/syck/lib/syck/rubytypes.rb#L152
<https://github.com/ruby/ruby/commit/5571c7315e118b339c6b6590e666dfda68a7327d>

In `psych` that method was moved from `String` to service class (the only right way):

<https://github.com/ruby/psych/commit/c9cd187d5aa8fa6607dd463b5f98a65483ae39ce>

So.. There is a strange thing. Redmine retrieve method to `String` from old `YAML-engine` (sic!). It's not normal.

I don't know, maybe that should be self-method in `Redmine::Scm::Adapters::AbstractAdapter` or in some new class or module:

```
def binary_data?(string)
  (string.count("^~", "\r\n").fdiv(string.size) > 0.3 || string.index("\x00")) unless string.empty?
end
```

But it definitely should not be in `String`.

This is patch in this way.

Big thanks.

One thing: `ScmData` is not look as class when it have only one self-method. I think that should be a module.

And if we have `ScmData` constant then we can name this method just `binary?`
