Target version:				
Resolution:	Invalid		**Affected version:**	2.5.0

Description

Interested in making a custom query on a sub project and making the same available to all users on any project, so that the users can be on any project, but can execute this custom query.
Example: we have users working on different enhancements, but need the same users to see customer reported issues. So need them to have a look at a particular place, where they are added as watchrs, to pick up issues. plz help!
