Description

Hello all,

I have been sifting through the bugs, defects and help requests on getting Redmine to work when being reverse proxied. I looked at the solutions and gave them a run, but got nothing. I have access to a server that is exposed on the Internet. This server serves up a portal for my company. I want to be able to reverse proxy redmine through our portal so I added these lines:

```
ProxyPass /redmine http://myRedmine/redmine
ProxyPassReverse /redmine http://myRedmine/redmine
```

I have used this solution to reverse proxy other services, but this does not work. Can someone please tell me whats going on. Note that I have changed the default port from 3000 to 80 (tried both) and also tried using mongrel with a prefix of /redmine. Does anyone have any ideas or have come up with a solution to this?

Another solution: add the following line at the end of config/environment.rb:

```
ActionController::AbstractRequest.relative_url_root = "/redmine"
```

I attempted this solution as well with no luck. Here is the URL for my portal.

<https://portal.myCompany.com/redmine>
